RHAPSODY

EBOOK · PRODUCT LEADER'S GUIDE

Slay the interoperability dragons that block your growth

A modern guide to building AI-ready healthcare connections that won't leave your team burnt out.

INTRODUCTION

Every health tech product leader starts with a bold vision.

Better access. Smarter workflows. Real impact.

Then come the dragons.

Not the mythical kind, but the very real interoperability challenges that slow momentum, drain teams, and quietly put growth at risk.

A quest beyond point integrations

Healthcare innovation has moved far beyond point-to-point connections.

This guide is your map. Not to fight every battle yourself—but to recognize which dragons matter, which ones you shouldn't be fighting alone, and how to move forward without getting scorched.

From digital front doors and virtual care to analytics, automation, and AI, modern solutions depend on trusted, real-time data flowing across an ecosystem of providers, partners, devices, and platforms.

EHRs still matter. But they're no longer the whole kingdom.

To compete in this new landscape, interoperability must be flexible, scalable, and ready for what comes next—not just what worked before.

61%

of surveyed healthcare leaders cite connecting more external systems as a top priority.

THE LANDSCAPE

The good, the bad, and the better way

You're building something meaningful. A differentiated solution designed to improve outcomes, efficiency, or access to care. That's the quest.

01 · THE GOOD

To scale, you still need to connect to:

- ✓ EHRs with uneven data-sharing maturity
- ✓ Legacy HL7 systems that aren't going anywhere
- ✓ Data sets that don't fit neatly into your model
- ✓ AI solutions that demand access to more data

02 · THE BAD

Each new customer or data model adds complexity.

Suddenly, your product roadmap is competing with integration work—and the dragons start circling.

03 · THE BETTER WAY

With the right agentic interoperability strategy and partner, integration becomes part of the terrain, not the obstacle.

The dragons don't disappear, but they stop blocking your path.

THE CHALLENGE

What slows product teams down (and why it matters)

These aren't edge cases. They're the reality of scaling in healthcare.

YOU NEED TO

- Onboard customers faster
- Avoid rebuilding integrations for every new customer
- Ensure clean, trusted data for analytics and AI
- Access comprehensive EHR and patient data
- Protect engineering time for differentiated features

If you're tackling two or more of the challenges ahead, interoperability is no longer a side quest—it's core to your strategy.

THE FIELD GUIDE

Meet the 7 modern interoperability dragons

Most teams don't lose momentum because of one big failure, but because of a few familiar dragons that keep reappearing.

01 The connectivity sprawl dragon

Every customer has their own version of "standard," turning reuse into rework.

BREATHES Rework WEAK TO Reuse at scale

02 The hidden data dragon

Critical information lives outside FHIR endpoints, limiting insight and automation.

BREATHES Blind spots WEAK TO Wider data reach

03 The hybrid standards dragon

FHIR is growing—but HL7, CDA, flat files, and custom APIs still dominate daily operations.

BREATHES Format chaos WEAK TO Any standard

04 The coordination dragon

"Just one integration" turns into months of discovery calls and coordination.

BREATHES Endless calls WEAK TO AI integration

05 The identity dragon

Mismatched identity data undermines analytics, AI, and trust downstream.

BREATHES Bad matches WEAK TO Trusted data

06 The scaling dragon

Each new integration slows the next deal, putting growth at risk.

BREATHES Stalled deals WEAK TO Build once

07 The always-on dragon

Monitoring, security, compliance, and support never stop once connections go live.

BREATHES Alerts WEAK TO Built-in monitoring

You don't beat these dragons by fighting harder.
You beat them by building smarter.

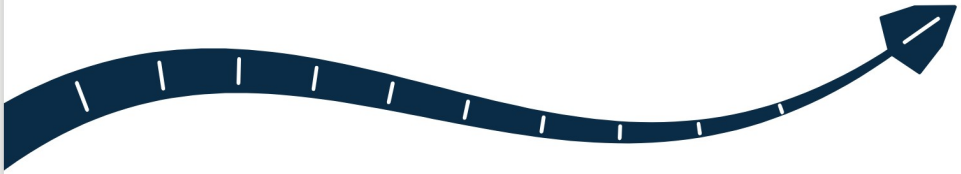

WHAT TO LOOK FOR

Choosing a companion for the journey

The right interoperability partner doesn't promise a dragon-free world. They help you move forward anyway, with fewer surprises and less strain on your team.

in·ter·op·er·a·bil·i·ty Hard to say, easy to do with Rhapsody.

- A connectivity layer that bridges modern and legacy systems and puts AI to work to simplify integration
- Support for APIs and integrations across FHIR, MCP, HL7, CDA, X12, and more
- Bi-directional data flow—read, write, push, and pull
- Flexible deployment options in your cloud, their cloud, or iPaaS
- Built-in security, monitoring, and compliance
- Deep healthcare expertise with best-in-class support—not general-purpose tooling

HOW RHAPSODY HELPS YOU KEEP MOVING

Build once. Scale anywhere.

Rhapsody is the trusted digital health and AI enablement partner behind more than 1,900 healthcare organizations worldwide.

We help teams connect, normalize, and activate healthcare data—across modern and legacy standards—so interoperability becomes a foundation for growth, not a recurring battle.

Neutral by design	Connect to any system and organization, including by translating legacy data exchange to modern APIs and FHIR.
Speaks any language	Streamlines development of APIs and interfaces for connectivity in FHIR, HL7, MCP, CDA, X12, SQL, and more.
Built to scale	Deployed around the world at thousands of healthcare organizations.
AI-powered, built to accelerate your AI	AI-powered solutions simplify and accelerate integration—so your AI and automation initiatives move faster.
Flexible deployment models	Fully automated integrations or managed by your team—your journey, your choice.

YOUR PATH, YOUR CHOICE

Choose your gear wisely.

Some teams want to wield every sword themselves. Others want to travel light and move fast, with partners at the ready. With Rhapsody, you don't have to choose one path forever.

LET RHAPSODY DO THE HEAVY INTEGRATION LIFTING SO YOU CAN

Do more with the team you have. Accelerate customer onboarding without expanding your integration team.

Maintain visibility and control—without carrying every operational burden.

Connect to any organization or system across markets—regardless of their requirements.

PROOF

Proven in the field

Rhapsody customers don't just slay dragons. They keep moving forward—faster, safer, and more confident.

1,900+

Customers across acute, ambulatory, health tech, public health, payers, and life sciences

2x

ROI in 3 years

Top-ranked

By KLAS for healthcare integration

The first

Healthcare integration agent

100%

Focused exclusively on healthcare

BEYOND GO-LIVE

The quest doesn't end at go-live

Go-live is just the first milestone. With the right connectivity layer at your foundation, you can:

- ✓ Scale customer onboarding without slowing sales
- ✓ Expand into new markets and use cases
- ✓ Prepare data for your future use cases
- ✓ Build lasting trust with customers and partners

Ready for the next stretch of the journey?

Let's talk about how Rhapsody can help you move forward, without getting burned.
